

CPESN® Health Equity pharmacies connect community and patients to address drivers of health for better care, cost savings

As trusted community health providers, CPESN Health Equity pharmacies are on the front lines with patients every day identifying barriers to care and solving problems. Community Health Workers, navigators, and peer health mentors integrated in our local pharmacies can help close care gaps that lead to poor health outcomes for the most complex patients.

How we help

- Assure that patients get the care they need through screening and referrals
- Connect patients to resources, eliminate barriers
- Service coordination, help navigate the health system
- Educate, counsel complex patients on disease management

Increasingly, Medicaid MCOs, and value-based health plans are adding social determinants of health screenings and referrals to community pharmacies for best-practice services to address health inequities. For patients, that means better care. For payers, better care can lead to cost savings. CPESN Health Equity pharmacies are ready to help you address the growing health inequity crisis.

LOCAL
Local, culturally competent pharmacies

ACCESS
Access to quality healthcare for all

VALUE
Fewer barriers, improved outcomes, lower cost of care

Up to 80% of someone's health outcomes are associated with Social Determinants of Health.
