

Increase revenue with higher reimbursement for pharmacy care at-home services for seniors and special needs patients in your community

CPESN® Pharmacy Care at Home is designed to help your pharmacy enhance revenue through higher reimbursements for services provided to eligible seniors living at home. With the rise in Medicare-eligible patients aging in place, CMS has established reimbursement criteria for essential at-home pharmacy services, such as medication synchronization, adherence packaging, and hand delivery.

This Special Purpose Program is exclusively for community pharmacies with a long-term care NPI participating in CPESN Networks. Your subscription to Pharmacy Care at Home program comes at no extra cost and includes:

- Interactive webinars
- Comprehensive how-to materials
- Templated forms
- Analytics and auditing support
- Access to exclusive email groups for quick assistance

If you don't have a long-term care NPI, the Pharmacy Care at Home team will assist you in obtaining one.

By participating, you can boost your pharmacy's revenue from services you're already providing to home-bound patients and position your pharmacy for value-based payer opportunities.

Potential Benefits for the Community Pharmacy:

- **Increased Profit:** Boost revenue through higher reimbursement from payers recognizing this higher level of care and reduce your cost of goods through valuable buy-side opportunities
- **Secured Patient Base:** Retain your in-home seniors and other special needs patients as competitors develop at-home services
- **Value-Based Care Opportunities:** Position for value-based care arrangements with reimbursement linked to patient outcomes through CPESN
- **Improved Workflow and Efficiency:** Incorporate shared best practices for more efficient operations and better use of pharmacy staff
